***IMRISneuro* TO BE INSTALLED AT CALGARY FOOTHILLS
MEDICAL CENTRE**

Winnipeg, Manitoba February 14, 2008 - IMRIS (TSX:IM) today announced the purchase of *IMRISneuro* by the University of Calgary for installation in the Seaman Family MR Centre at Calgary Foothills Hospital.

This will be the second system that IMRIS has provided to better serve the patients of the region.

“We are delighted the University of Calgary has endorsed IMRIS’ flagship product for the second time,” said David Graves, President and Chief Executive Officer. “We are confident that *IMRISneuro* will make a major contribution towards providing Foothills’ patients with the highest standard of treatment and care.”

IMRISneuro is a fully integrated operating room that combines a one-of-a-kind movable MRI with the IMRIS surgical information management system. Without moving the patient, *IMRISneuro* allows surgeons to safely image patients during brain surgery.

About IMRIS:

IMRIS is a global leader in providing fully integrated, intra-operative imaging solutions designed to assist in the treatment of disease and to measurably improve patient outcomes. The unique and innovative *IMRISneuro* has been validated by leading neurosurgeons around the world and is increasingly being used by world-class neuroscience centers.
