

IMRIS careers

Functional Area Research & Development

Position Title Stroke Software Developer

Job Time Full-Time

Job Description This position will be responsible for developing reliable STROKE product software that will enable IMRIS to deliver high quality Stroke imaging and analysis products. Responsibilities include importing external Stroke software source code and libraries into the IMRIS product including the integration into the software development process and tools. Other responsibilities include working with other staff to define functional and user-interface requirements; design and document software; develop, implement and test/debug software and tools; improve the performance reliability and reusability of existing software systems; and deliver idiomatic and intuitive user interfaces.

KNOWLEDGE, SKILLS, AND ABILITIES REQUIREMENTS

- Minimum of 5 years industry experience as a developer of product-based software, preferably for medical products
- Demonstrated ability to deliver usable, reliable and maintainable software products.
- Minimum of 5 years of C# and/or C++ programming experience.
- Expert knowledge of software design and development
- Good testing and documentation practices.

To apply for this position please send your resume in confidence to hr@imris.com. Please state “IMRIS Job Application: Software Developer” in your subject line when emailing your application.

Only those candidates selected for interviews will be contacted.
