

Functional Area: Research & Development
Position Title: Systems Engineer
Job Time: Full-Time

JOB SUMMARY

The Systems Engineer will evaluate, design, implement and integrate software and hardware components for IMS, a world-leading operating room system. The system combines audio and video technologies, high bandwidth networks, control systems, and presentation software

The Systems Engineer will work over the entire span of activities, including:

- Evaluation of existing and available designs and products.
- Definition of system requirements.
- Generation of new and unique system designs.
- Design and implementation of system components.
- Analysis of system performance parameters.
- Integration and testing of selected designs.
- Maintenance and support of deployed systems.

Essential Qualifications and Skills:

- Degree in Electrical Engineering or Computer Engineering from an accredited university.
- 5 -10 years of work experience.
- Knowledge of audio, video, lighting, power and networking systems.
- Able to learn and apply a wide range of engineering knowledge: software, hardware, networking and electrical.
- Wants to provide solutions and take ownership of responsibilities.
- Ability to work effectively in a team or undertake tasks alone with limited guidance.
- Excellent interpersonal and communication skills (written and verbal).
- Ability to 'think outside the box' and be innovative.

Assets:

- Experience in medical systems.

To apply for this position please send your resume in confidence to hr@imris.com including "Systems Engineer" in the subject line.

Only those candidates selected for interviews will be contacted.
